SUMMARY

Fourth-year Computer Engineering student at Ankara Yıldırım Beyazıt University with a strong foundation in software development and a focus on Object Oriented Programming and Machine Learning. Experienced in developing real-world applications such as Mobile ADAS, Traffic Sign Recognition, and Vehicle Detection using YOLO26n. Proficient in Python, C++, and Java, with a solid understanding of data analysis and object-oriented programming. Passionate about building innovative technology solutions and continuous learning.

EDUCATION

Ankara Yıldırım Beyazıt University	Ankara, Turkey
B.S. in Computer Engineering	Oct 2021 – Present

PROJECTS

Istanbul Earthquake Assembly Area & Risk Analysis	May 2026
<i>Python, Scikit-learn, K-Means, DBSCAN, Folium, Pandas</i>	

- Analyzed and clustered earthquake assembly areas and seismic risk zones in Istanbul using K-Means and DBSCAN algorithms.
- Evaluated model performance utilizing Sum of Squared Errors (SSE) and Silhouette coefficients to optimize cluster configurations.
- Developed interactive geographical risk maps using Folium to visualize assembly locations and risk distributions.

OTT Viewer Retention & Drop-off Analysis	Jan 2026 – Feb 2026
<i>Python, Scikit-learn, XGBoost, Pandas</i>	

- Developed a machine learning pipeline to predict viewer drop-off and retention risks (Low/Medium/High).
- Compared 8+ algorithms including Random Forest and SVM, achieving optimal performance with XGBoost.
- Implemented advanced techniques like Class Weighting and Threshold Tuning to handle imbalanced data.
- Conducted Feature Importance analysis to identify key drivers of viewer engagement.

Mobile ADAS (Advanced Driver Assistance System)	Oct 2025 – May 2026
<i>Python, YOLO26n, Machine Learning</i>	

- Trained a single unified real-time YOLO26n model for simultaneous Traffic Sign Recognition (TSR) and Vehicle Detection.
- Developed optimized driver alert mechanisms tailored for mobile device deployment.

Arcane Brawler (2D Action Game)	Nov 2025 – Dec 2025
<i>Unity, C#, Object-Oriented Programming</i>	

- Designed and developed a 2D action game featuring dynamic combat and physics-based interactions.
- Implemented enemy AI behaviors using Finite State Machines and managed game states effectively.
- Utilized OOP principles to create modular and scalable scripts for player mechanics and UI systems.

TECHNICAL SKILLS

- Programming Languages:** Python, Java, C, C++, C#
- Machine Learning:** XGBoost, Scikit-learn, YOLO26n, TensorFlow, Pandas, Matplotlib
- Frameworks & Tools:** Unity, Git/GitHub
- Web Technologies:** HTML, CSS, JavaScript
- Languages:** English (Professional)

CERTIFICATIONS
